### Firewall protection

Enable the firewall protection

#### Rules

You can specify which programs can access the Internet (or network).

Enable or disable Windows services.

Specify the addresses, ports and protocols that your computer can use to communicate with other computers.

#### Networks

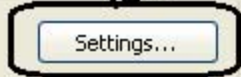

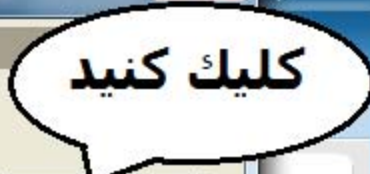

You can configure the security level of the networks.

Enable automatic mode

Automatically set the security level to be applied to new networks to which you connect.

#### Wi-Fi

Blacklist and whitelist of computers with access to the network.
